EMPLOYMENT *Data Science Intern, **Danaher Labs**, Santa Clara, CA* 04/2015 - present

*Analytics Intern, **AutoGrid Systems**, Redwood Shores, CA* 11/2014 - 04/2015

- Implemented with Python and R **time series analysis** for electric load forecasting using Neural Networks, Generalized Linear Models, SARIMA and Holt Winters models.

*Postdoctoral Researcher, **University of California, Berkeley*** 11/2011 - 04/2014

- Identified fluorescent signals in noisy images by developing **image processing** methods using IDL and Matlab.
- Modified step-finding algorithms for experimental time-series data using Matlab.
- Quantified experimental results by creating a probabilistic model of experimental conditions.

*Research and Teaching Assistant, **ETH Zurich**, Switzerland* 10/2007 - 07/2011

- **Simulated** quantum mechanical phenomena in Matlab to support experimental results.
- Automated experiments by writing large scale LabView and Matlab programs for device control and **data acquisition**.
- Developed physical models of nano-structures by designing and running experiments and analysing experimental data.

Selected Coursework *MSc Analytics, University of San Francisco* 07/2014 - present

- Performed **sentiment analysis** classification on movie reviews using Random Forests, Logistic Regression and Naive Bayes algorithms. Implemented Neural Networks for feature engineering (top 10% on the Kaggle board).
- **Webscraped** Yelp and Eventful websites to create animated maps with Shiny and ggplot2 packages in R that indicate restaurants and nearby social events.
- Implemented a **RESTful** service using Python Flask and MongoDB.
- Created a **search engine** by implementing TF-IDF weighting scheme on 80,000 XML documents using Python.
